No-Clean Aerosol Filling System

Put Away the Cleaning Solvent!

This revolutionary filling system delivers perfectly blended aerosols without the need to clean between fillings.

No Cleanings

"No cleanings" means reduced operational costs, no cleaning solvent costs or hassles, and an increase in small quantity sale profits.

Efficient & Waste Free

The entire paint contents are injected into the aerosol in one powerful movement with no loss of paint.

Compact Design

About the size of a coffee maker, the filling system requires minimal counter space and recommended air pressure of 110 PSI.

Color Indicator on Cap

A portion of the paint seals to the cap during the filling process to indicate color in can.

Safe to Operate

Filling only starts with complete closure of a metal shatterproof door.

EZ to Operate

1. Remove cylinder cap and spray nozzle.
2. Fill the cap with properly formulated paint.
3. Insert aerosol can and close the door.
4. Can will automatically fill in 3-5 seconds.
